

Winter 2023

The Link

Promoting reuse and recycling in Nebraska

Solid Waste Management and Recycling Update: The Bipartisan Infrastructure Law

The Spring 2022 issue of The Link featured a roadmap to the \$350 million available for reuse and waste management issues in the Bipartisan Infrastructure Law (BIL). Following is the Year Two Anniversary update of those efforts.

The Bipartisan Infrastructure Law (BIL) provides \$350 million for EPA to implement the Solid Waste Infrastructure for Recycling (SWIFR) grant program, authorized under the 2020 Save Our Seas 2.0 Act, and authorizes and funds a new Recycling Education and Outreach (REO) grant program. The BIL also provides \$10 million to develop and promote safe, economical best practices for collecting batteries to increase recycling and \$15 million for EPA to develop a voluntary labeling program for batteries. Over the last two years, EPA has created both new grant programs and announced over \$105 million in new awards to build a circular economy and support recycling infrastructure.

Solid Waste Infrastructure for Recycling: Resources provided through the BIL are designed to transform recycling and solid waste management by helping communities modernize local waste management systems and build a circular economy. Mismanaged waste can compound social and economic conditions in historically underserved and overburdened communities. The BIL provides EPA with

additional authority and resources to support local waste management infrastructure and recycling programs. Some communities that lack waste management infrastructure do not have curbside waste collection services, recycling, or composting programs. This increases the burden on landfills, decreases their capacity, and increases greenhouse gas emissions. Food waste is the single most common material sent to landfills in the United States, comprising 24 percent of all material. More importantly, methane from landfills creates 8 percent of global greenhouse gas emissions from the anaerobic decomposition of food waste. Preventing food waste increases food security, promotes resource and energy conservation, and helps mitigate climate change by reducing greenhouse gas emissions.

The Solid Waste Infrastructure for Recycling (SWIFR) grant program provides grants to implement the National Recycling Strategy to improve post-consumer materials management and infrastructure; support improvements to local post-consumer materials management and recycling programs; and assist local waste management authorities in making improvements to local waste management systems. The SWIFR grant program is divided into several funding opportunities: states and territories, communities, and Tribes and InterTribal Consortia.

In September 2023, EPA announced selections for over \$105 million to support recycling infrastructure across the country. This announcement included approximately \$32 million that were awarded non-competitively to all 56 states, territories, and the District of Columbia, as well as approximately \$73 million that EPA intends to award to 25 communities, ranging from big cities to small rural communities. This announcement marked one of the Agency's most significant investments in support of the National Recycling Strategy, with approximately 81 percent of funding going to disadvantaged communities, far surpassing the Justice40 Initiative goal of 40 percent.

Examples of these 25 community investments include Bozeman, Montana, where the city will use its \$1.6 million grant award to build residential collection infrastructure to provide composting services for up to 7,000 households, encouraging and increasing collection of organics and food waste while reducing greenhouse gas emissions. New Orleans, Louisiana, will use its grant of just under \$4 million to expand its current residential curbside recycling program to all eligible households. This expansion will ensure universal and equitable access to curbside recycling, provide new recycling access to about 73,000 households and replace 10,000 legacy recycling carts. New Orleans will also develop a 10-year solid waste master

plan that evaluates regional recycling processing infrastructure and capacity, explores opportunities for organics diversion including food waste, and explores infrastructure and policy needs to address waste diversion in multifamily and commercial operations. These project components will help the city meet its Climate Action Plan goal of a 25 percent waste diversion rate by 2030.

Recycling Infrastructure Grants for Communities – 25 Total Selections

Recycling Education and Outreach Grant Program: To reduce the impacts of materials and strengthen the nation’s recycling system, EPA has undertaken significant efforts to advance the circular economy in the United States. The BIL authorized \$75 million for the program and projects funded through this grant program are designed to inform the public about residential or community recycling or composting programs, provide information about the materials that are accepted as part of residential or community recycling or composting programs, and increase collection rates. EPA has also developed a Model Recycling Program Toolkit to help states, territories, local governments, Tribes, nonprofit organizations, companies, and public-private partnerships in effectively designing and implementing programs related to recycling, composting, anaerobic digestion, reuse, repair, and waste reduction.

Batteries: The BIL makes historic investments in batteries to increase battery collection and recycling efforts nationwide and to reduce battery-related fires at waste management facilities. Currently, many consumers do not know where or how to recycle batteries. When discarded improperly, critical materials inside batteries are lost and cannot be recycled into new batteries. Batteries can also start fires throughout the municipal waste management system, from transpor-

tation and transfer facilities to materials recycling facilities, scrap yards, and landfills, causing air pollution issues and threatening the safety of workers and first responders.

Establishing a common set of best practices will therefore make recycling batteries easier while keeping workers, nearby communities, and waste management and recycling facilities safe. The BIL provided \$6 billion in total funding, mostly to the Department of Energy, to support domestic battery production, collection, and recycling, and calls on EPA and DOE to play complementary roles. Specifically, the BIL provided EPA with \$10 million to develop and promote safe, economical best practices for collecting batteries to increase recycling and \$15 million for EPA to develop a voluntary labelling program for batteries and outreach materials for industry and the public.

Expected Results Year 3: EPA anticipates announcing selections for the Recycling Education and Outreach (REO) Grant Program and the Solid Waste Infrastructure for Recycling (SWIFR) grants for Tribes and intertribal consortia in November 2023. EPA will begin providing technical assistance to grantees to implement their grants in Year 3. The program will also prepare to announce and release additional funding opportunities.

For batteries, EPA will build on existing efforts to safely manage batteries at their end of life, as well as collaborate with DOE on these issues as the Agency continues to implement the new work directed by the BIL. EPA plans to release reports on battery collection best practices, as well as battery labeling guidelines. EPA will also continue efforts to develop the battery labeling guidelines and establish best practices in consultation with states, Tribes, local governments and other interested parties. As such, EPA will work on a series of engagement activities in Year 3 that will inform the development of the labeling guidelines and best practices for collection.

Nebraska Materials Exchange Program Application

Identify the waste stream or surplus material you are generating or seeking. The more information provided, the more likely an exchange will occur. Questions? Call Keep Nebraska Beautiful at 800.486.4562. (or in Lincoln 486.4622) Please complete all applicable items. If you have more than one item, copy this form for each, or attach a list of materials & quantities.

Company/Organization _____ Date _____
 Contact _____ Email _____
 Mailing Address _____
 City _____ State _____ ZIP _____
 Phone () _____ Fax () _____

1. Is your company/organization a 501(c) 3 nonprofit organization? Yes No
2. May we release your name/address/phone to interested parties? Yes No
3. Are you SEEKING or GENERATING this material? Seeking Generating
4. Please Specify Material Here: *Generic name or primary usable constituent (If plastic, list mfg. & commercial name/grade #):

- _____
5. List quantity (in units: pounds, etc.): _____ Per: Day Week Month Quarter Year 1X only
 6. Physical state: (if applicable) Liquid Slurry Solid Semi-solid Sludge Dust Cake Gas Other
 7. Packaging: (circle one) Bulk Drums Dumpsters Gaylords Pallets Bales Other _____
 8. General information as known: chemical composition, type of plastic, main ingredients, cost, pH, toxicity, reactivity, color, particle size, flash point, total solids, purchase date, industrial process generating this material, contaminants, etc.

- _____
9. Available to interested parties (if applicable): Sample _____ Lab Analysis _____ Independent Analysis _____
 10. Please list any items your company would be willing to donate to schools or nonprofit organizations.
 (Working computers, office furniture and equipment, cleaning supplies, etc.)

Thanks for your interest in the Materials Exchange. We'll keep in contact regarding your listing, & send email notices regarding the electronic publication of our quarterly newsletter The Link. If an Exchange referral results in a match, we'd appreciate the information - landfill diversion totals ensure the Exchange remains accessible & free to all Nebraskans.

Please mail, fax, or complete this form online:
